1959 CAR and TRUCK FUSE LIST

SHOWING PROPER FUSE TO USE AND ITS LOCATION

FOR 15 MODEL YEARS

Explanation of Letter Symbols

The letters in the right hand column show — WHERE fuse is located — and HOW it is mounted.

Where two locations or two types of mounting are given, it means that fuse may be located or mounted in either way.

1st letter shows where fuse is LOCATED

- D—On Dash (Firewall)—Inside of Car
- E—Under Hood—On Dash (Firewall)
- G—On or in the Device Protected
- I—Instrument Board—Back of—
- J—Instrument Board—Front of—
- P—In Glove Compartment
- T—In Trunk
- U—Under Hood or in Engine Compartment—(not on Dash or Device)
- W—Inside or on Switch
- X—Under Seat

2nd letter shows how fuse is MOUNTED

- B—Inside of Box
- C—In Exposed Clips
- E—In mounted Fuse Holder
- F—In Fuse Holder on Wire
- P—In Panel or Main Fuse Block.

Information for this list was supplied by the Engineering Departments of the Car and Truck manufacturers. Sometime you may encounter cars or trucks that have fuses other than those shown, or located or mounted differently than listed. This is due to the changes made by manufacturers to improve their product while in production.

Fuses on accessories may differ from the list in size, location and mounting because they are often installed by Dealers who do not follow the factory specifications.

On some circuits one fuse may protect more than one light or device. In such cases that fuse, its location and mounting are

shown after each light or device to make it easier to get the correct fuse information.

Where a fuse is not listed for a model or year it indicates that no fuse is used.

Miscellaneous circuit means circuit for lights or devices not listed.

The important thing to bear in mind is that in replacing fuses, the size and type originally installed should be used.

12 Volt Systems—The voltage does not affect the operation of the fuse. Fuses on 12 volt systems are ordinarily used in smaller amperages than fuses on 6 volt systems.

When Installing a Fuse

Be sure clips are clean — if not, wipe clean or brighten them with emery cloth.

Be sure clips hold fuse tightly to avoid poor contact. If the fuse turns easily in clips, remove it, squeeze clips

together and then replace fuse.

Use the right size fuse — Too small an amperage will blow on ordinary current. Too large an amperage will let too much current flow, which may damage the wiring, radio, or set fire to the entire car.

IMPORTANT

Where two fuses are shown for the same device it means that some cars of same make and model take one fuse, other cars the other fuse. It does not mean they are interchangeable.

SFE 7½ and AGW 7½ fuses are interchangeable.

ADD TO YOUR PROFITS BY SELLING Genuine BUSS HOUSEHOLD FUSES

The great majority of your customers use fuses in their homes. Make it convenient for them to buy fuses from you — it will give you new sales and profits.

BUSS Plug fuses—Most convenient to use. Big, clear window shows all of fuse strip against white background — it's easy to see blown fuse. "Safety-design" body is shockproof — protects fingers against cuts. Each fuse is inspected and electrically tested to assure highest quality with no come-backs. Carry Underwriters' Laboratories Inspected label.

Packed 5 in box. 100 in shelf package — or available in . . .

No. 333 Display Stand Assortment. A fast-moving assortment packed in a compact metal display stand that stands on counter, hangs on wall, shelf or rack. Contains 70 fuses (35-W15, 10-W20, 25-W30)

FUSETRON Plug fuses—Regular fuses often blow needlessly on motor-starting currents or other harmless overloads. Using fuses larger than 15 amperes to stop this is dangerous. Safe, "stronger" type FUSETRON dual-element fuses stop such trouble by blowing only when things go wrong — not before — yet give all the protection of regular fuses against short-circuits.

Packed 4 in box. 40 in display package — or available in . . .

No. 3 Display Assortment. A balanced stock for dealers who want only a small quantity of popular sizes . . . a profitable way to increased fuse sales. Contains 40 fuses (20-T15, 12-T20, 8-T30)

BUSS Fustats—Dual-element fuses with Type "S" base. Give same protection as FUSETRON fuses PLUS preventing dangerous practice of using oversize fuses, bridging or tampering. Fit plug fuse holder by means of an adapter.

Packed 4 in box. 100 in shelf package.

BUSS Fustat Display Stand. Free on request with any Fustat order. Eye-catching metal stand helps sell more Fustats and build bigger profits.

Profit now . . . Order BUSS household fuses from your wholesaler today.

To make Glass Tube fuse selling more profitable — display a **BUSS FUSE ASSORTMENT**

No. 200 Metal Display Stand Assortment. Sells by reminding motorists of their need for fuses. Can be used in island display, window, on counter, or hung on wall. Makes servicing easy. Keeps stock handy, neatly held in separate tiers.

No. 201 Plastic Display Box Assortment. A modern, clear plastic, eye-catching display. Stands on counter or hangs on wall. Box has five compartments. Shows contents clearly even with lid closed. Both displays contain 200 fast selling fuses.

**Order one from your wholesaler.
Keep it out where it can be seen.**
