KIDDER MOTOR VEHICLE

THE KIDDER MOTOR VEHICLE.
MODEL No. 2. LIGHT RUNABOUT.

THE requirements of a successful motor vehicle are safety, reliability, durability, speed, and strength. No one of these requirements must be sacrificed to another; all must be possessed in the right proportion.

A practical motor carriage must be good for hard, continuous service, over all kinds of roads, for a long term of years, with need of but few repairs. Above all, it must be absolutely safe and reliable.

Years of experiment and gradual development along lines which experience has proven right has led to the production of the present type of Kidder Motor Vehicle. It is a thoroughly practical, safe, and reliable carriage.

Steam is the motive power. A thorough investigation, in foreign countries and at home, of the leading forms of motive power available, has convinced us that steam is the best for all-around service. It is reliable. Its water and fuel supply can be obtained almost anywhere. The failure of either does not endanger safety.

We have practically eliminated all objections to steam as applied in our vehicles.

A condenser prevents all objectionable vapor in the atmosphere.

"ON THE ROAD" WITH A MODEL NO. 2.

There is no noise of escaping steam.

The burner is without smoke, is odorless and cannot be extinguished by gales.

The motor transmits its power, by durable, noiseless gear, direct to the rear axle. Sprocket wheels and chains have been discarded.

The machinery is mounted in a strong steel tubular frame, independent of all woodwork.

When once started, the carriage is ready for either intermittent or continuous use without other attention than proper lubrication, water and fuel supply.

The beauty of our designs, their gracefulness and the absence of all awkward features, together with the great advantages they possess in mechanical construction, commend them at once to the intelligent purchaser in search of the highest type of practical motor vehicle.

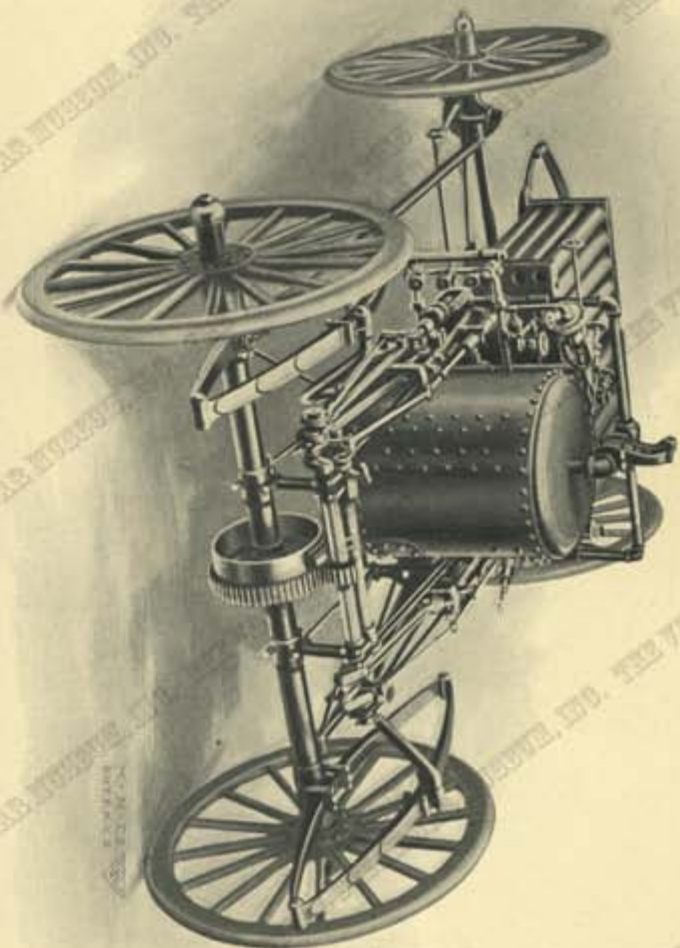

We invite inspection of our new models shown at our exhibit in the Machinery and Transportation Building, Pan-American Exposition.

Descriptive pamphlet, containing specifications, mailed upon application to the Kidder Motor Vehicle Company, New Haven, Conn. Boston Warerooms, 314 Boylston Street.
